1x Opti ® 2S 2 Manual Gun

1x MagicControl CM30

1x OptiCenter OC02 with US06 Sieve

1x Classic Open 4

Application Success Stories

Company Profile

Relax 2000 is a hungarian company operates as well as on the Slovak market since 1997. It's main priority is the production and development of own profiles and components for shading technologies and equipments. Their products are sold by more than 100 companies throughout Western and Eastern Europe.

Company Goals

Until the company decided to extend their factory with a new producing building, the coating was done by job coaters. In order to trigger them with an own powder coating system, they were looking for high quality solution, with quick color change and minimal powder loss.

Success with Gema

With the MagicCompact EquiFlow in combination with the OptiCenter management, Relax 2000 is now able to work in three shift with a range of 10-15 color change day to day.

Curiosity:

The company invested in an aluminium profile extrusion handling system at the same time.
